Did You Know?

1.

The Appalachian Mountains are super old. They are much older than the Rocky Mountains in the western United States. Some of the rocks in the Appalachians were formed over a billion years ago! That's before dinosaurs even existed.

2.

A long time ago, Spanish explorers were walking around

Florida. They found a Native American village and wrote down its name as

"Apalchen." The Spanish changed it to "Apalachee." They used it for the tribe and the area. Later, people started using the name for the mountains too.

3.

The tallest mountain in the Appalachian range is Mount Mitchell. It is located in North Carolina. It's 6,684 feet high. That's like stacking about 668 school buses on top of each other!

5.

The Appalachian Mountains were formed by the Earth's giant plates moving around. These plates crashed into each other and created mountains. Then, they pulled apart and created oceans.

4.

The rivers in the Appalachian Mountains flow in different directions. Some flow east to the Atlantic Ocean. Others flow west to the Mississippi River.
