TULLE PLANTING

AT ATITLAN LAKE, PANAJACHEL, SOLOLA

Conservation and rescue of biodiversity in Lake Atitlán

On Monday, May 17, Porta Hotels was part of a volunteer service with the Friends of the Lake Association to contribute to the conservation of biodiversity in the Lake Atitlán basin and the protection of flora and fauna species.

A total of 30 bunches of tulle were planted in 60 linear meters on the beach of San Antonio Palopó, one of the towns around the lake

What is tulle and what is it for?

Tulle is a bio-remedial plant that acts as a natural filter against beach pollutants, controls the spread of cyanobacteria, and is a habitat for multiple life forms, crustaceans, mollusks, amphibians, fish, and local and migratory water birds. It is also used by communities to make handicrafts that help the local economy

Porta Hoteles is a company committed to generating positive impacts in the communities where it operates and therefore voluntarily supports organizations, associations and state and private entities that have programs for the conservation of the natural environment

"Taking care of our lakes, forests and water sources ensures a better future"

Teamwork and satisfaction in seeing how the ecosystem around the homes of our employees is regenerated is a motivation to continue with our social projects
